DATE MAILED: 06/07/2005

Please find below and/or attached an Office communication concerning this application or proceeding.

<b>Office Action Summary</b>	<b>Application No.</b>	<b>Applicant(s)</b>
	10/759,112	AFFELDT ET AL.
	Examiner Robert R. Koehler	Art Unit 1775

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

#### Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

#### Status

- 1) Responsive to communication(s) filed on \_\_\_\_.
- 2a) This action is FINAL.                    2b) This action is non-final.
- 3) Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

#### Disposition of Claims

- 4) Claim(s) 1-59 is/are pending in the application.
- 4a) Of the above claim(s) \_\_\_\_ is/are withdrawn from consideration.
- 5) Claim(s) 1-24 is/are allowed.
- 6) Claim(s) 25-33 and 35-59 is/are rejected.
- 7) Claim(s) 34 is/are objected to.
- 8) Claim(s) \_\_\_\_ are subject to restriction and/or election requirement.

#### Application Papers

- 9) The specification is objected to by the Examiner.
- 10) The drawing(s) filed on 16 June 2004 is/are: a) accepted or b) objected to by the Examiner.  
Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).  
Replacement drawing sheet(s) including the correction is required if the drawing(s) is objected to. See 37 CFR 1.121(d).
- 11) The oath or declaration is objected to by the Examiner. Note the attached Office Action or form PTO-152.

#### Priority under 35 U.S.C. § 119

- 12) Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).
  - a) All    b) Some \* c) None of:
    1. Certified copies of the priority documents have been received.
    2. Certified copies of the priority documents have been received in Application No. \_\_\_\_.
    3. Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).

\* See the attached detailed Office action for a list of the certified copies not received.

RRK.  
6-2-05

#### Attachment(s)

1) <input checked="" type="checkbox"/> Notice of References Cited (PTO-892)	4) <input type="checkbox"/> Interview Summary (PTO-413) Paper No(s)/Mail Date. ____ .
2) <input type="checkbox"/> Notice of Draftsperson's Patent Drawing Review (PTO-948)	5) <input type="checkbox"/> Notice of Informal Patent Application (PTO-152)
3) <input checked="" type="checkbox"/> Information Disclosure Statement(s) (PTO-1449 or PTO/SB/08) Paper No(s)/Mail Date <u>01202004</u> .	6) <input type="checkbox"/> Other: ____ .

## **DETAILED ACTION**

### ***Claim Rejections - 35 USC § 103***

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of the various claims was commonly owned at the time any inventions covered therein were made absent any evidence to the contrary. Applicant is advised of the obligation under 37 CFR 1.56 to point out the inventor and invention dates of each claim that was not commonly owned at the time a later invention was made in order for the examiner to consider the applicability of 35 U.S.C. 103(c) and potential 35 U.S.C. 102(e), (f) or (g) prior art under 35 U.S.C. 103(a).

Evaluations of the level of ordinary skill in the art requires consideration of such factors as various prior art approaches, types of problems encountered in the art, rapidity with which innovations are made, sophistication of technology involved, educational background of those actively working in the field, commercial success, and failure of others.

The “person having ordinary skill” in this art has the capability of understanding the scientific and engineering principles applicable to the claimed invention. The evidence of record including the references and/or admissions are considered to reasonably reflect this level of skill.

Claims 25 to 33 and 35 to 59 are rejected under 35 U.S.C. 103(a) as being unpatentable over U.S. Patent No. 6,066,405 (Schaeffer).

Art Unit: 1775

Schaeffer teaches a nickel-base superalloy substrate having an optimized platinum-aluminum diffused coating. The process of producing a diffused platinum-aluminum coating includes the steps of providing a nickel-base substrate (for example, a gas turbine component), depositing a platinum layer on the substrate, diffusing the platinum into the substrate, providing a source of aluminum, and diffusing the aluminum into the substrate. See Figure 3. Schaeffer states that the optimized platinum-aluminum diffusion coating contains at least 18 weight percent platinum and at least 18 weight percent aluminum, the balance of the coating composition being interdiffused components of the substrate (for example, nickel and chromium). Schaeffer teaches that the platinum, aluminum, and nickel concentrations in the coating region vary with the depth of the coating, and the specific compositions of surface regions are measured by an integration method. See line 13 in column 4 to line 7 in column 6. Therefore, according to the teaching by Schaeffer regarding the measurement of specific compositions at various locations within a platinum-aluminum diffusion coating, it would be quite possible to optimize the coating process conditions for the purpose of obtaining particular platinum concentration profiles and aluminum concentration profiles within a platinum-aluminum diffusion coating.

Schaeffer differs from the claims in that Schaeffer does not specify the particular platinum concentration profiles and aluminum concentration profiles that are possible within a platinum-aluminum diffusion coating.

It would have been obvious to one having ordinary skill in the art at the time the invention was made to have *optimized* the coating process conditions to such a degree or extent that particular platinum concentration profiles and particular aluminum concentration profiles are generated on a superalloy substrate when a platinum-aluminum diffusion coating is produced because Schaeffer provides sufficient information about the useful process techniques and process conditions which can be controlled in the production of a platinum-aluminum

Art Unit: 1775

diffusion coating. A person skilled in the art of diffusion metal coating systems would have been motivated to rely on Schaeffer because a result-effective variable (such as diffusion coating conditions and the amounts of platinum and aluminum in contact with a superalloy substrate) *can be optimized* by a skilled person in order to achieve a recognized result (such as particular platinum concentration profiles and particular aluminum concentration profiles in the platinum-aluminum diffusion coating). See *In re Boesch*, 617 F.2d 272, 205 USPQ 215 (CCPA 1980). Generally, differences in concentration or temperature will not support the patentability of subject matter encompassed by the prior art unless there is evidence indicating such concentration or temperature is critical.

### ***Allowable Subject Matter***

Claims 1 to 24 are allowed.

Claim 34 is objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

The following is a statement of reasons for the indication of allowable subject matter: The prior art does not teach, suggest, or disclose a *component*, a *coating*, or a *method of producing a component* that includes the usage of a platinum-aluminum substrate surface region wherein at least one of the integrated aluminum content and the integrated platinum content in the substrate surface region is less than 18 weight percent.

### ***Conclusion***

Any inquiry concerning this communication or earlier communications from the Examiner should be directed to Robert Koehler whose telephone number is (571) 272-1536. The Examiner can normally be reached on Tuesday to Friday from 9:30 AM to 7:00 PM. The Examiner can also be reached on alternate Mondays.

Art Unit: 1775

If attempts to reach the Examiner by telephone are unsuccessful, the Examiner's supervisor, Deborah Jones, can be reached on **(571) 272-1535**. The fax phone number for the organization where this application or proceeding is assigned is **703-872-9306**.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see <http://pair-direct.uspto.gov>. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at **866-217-9197** (toll-free).
